PROJECTS

github.com/n1azizov

- **GitHub Repository Success Analysis** (Python, Pandas, NumPy, Matplotlib, Seaborn, LaTeX): Independent research analyzing 500 highly starred GitHub repositories to study how stars, forks, and other repository characteristics relate to popularity. Findings are written up in a research paper released with open-source code. Paper (DOI)
- **Attendance Management System** (Django, Python, SQLite): Web app for small-class attendance with session creation, absence marking, instructor role permissions, automated group configuration, and Django Admin; schema managed through migrations.
- **To-Do List Web Application** (HTML, CSS, JavaScript): Fully client-side task manager with subtasks, priority and status tags, category and color labels, sorting, and filtering. Data persists in browser localStorage, with the UI updated through DOM manipulation.
- **EATCoin Blockchain System** (C, Data Structures): Blockchain-style ledger using singly linked lists for transactions and daily blocks, with payments, transfers, balance computation, account history, and file export/import.
- **Authentication & Admin Framework** (Flask, JSON): Modular authentication framework with secure route handling, admin-restricted user management, dynamic static-file serving, and configurable JSON persistence.
- **Terminal Games & Utilities** (Python, C): UNO with full classic rules, Pishti (Turkish card game), and a multiplication practice tool.
